

Empowering CCBHCs with Specialized EHR Solutions

Certified Community Behavioral Health Clinics (CCBHCs) are making a significant impact on people who receive care.

Cantata's Arize EHR empowers CCBHCs to deliver coordinated, community-based behavioral healthcare while managing the rigorous requirements of CCBHC programs. Arize helps organizations expand access to services, improve care coordination, support outcome tracking, and navigate complex reimbursement and reporting requirements, all while maintaining high standards of patient care and data security.

Designed for integrated behavioral health environments, Arize combines clinical, financial, and operational workflows in a single platform to help providers improve efficiency, strengthen patient engagement, and support high-quality care delivery.

Benefits of Implementing Arize EHR for CCBHCs

-  Improve patient outcomes by facilitating coordinated care.
-  Expand access to care for underserved populations via built-in telehealth.
-  Enhance client engagement with integrated tools that lead to greater adherence to treatment and integration of care.
-  Compliance with federal quality measures ensuring high standards of care.
-  Financial sustainability through efficient billing management.

CCBHC Checklist for Success

Integrated Care Coordination:

Arize helps multidisciplinary teams coordinate care through integrated workflows, referral management, and support for transitions of care. It provides visibility into ED and hospital visit activity through connected care networks, enabling timely follow up. Arize can also support data exchange with Designated Collaborating Organizations (DCOs).

24/7 Crisis Services Support:

Arize includes built-in functionality to support 24/7 crisis intervention services, including access to the system for external partners, coordinating with mobile crisis teams and communicating with first responders to ensure timely interventions, which is a mandatory requirement for CCBHCs.

Specialized Billing and Revenue Cycle Management:

Arize is tailored to handle the complex billing requirements specific to CCBHCs, including Prospective Payment System (PPS) arrangements. This facilitates the comprehensive coordination of billing across Medicare, private insurance, and Medicaid, which is critical for CCBHCs due to their diverse funding sources.

Compliance with Federal and State Reporting Requirements:

Arize makes it easy to collect federally mandated CCBHC quality measures by integrating them into clinical workflows. Pre-built reports are provided to help clinics stay compliant with minimal manual effort. This is essential for CCBHCs, which are subject to stringent reporting and performance metrics.

Telehealth Capabilities:

Arize includes fully integrated telehealth built for behavioral health workflows that are not available in standalone solutions and minimize compliance risks. This enables providers to offer services remotely, expanding access to care for rural or underserved populations—a key goal for CCBHCs.

Interoperability Standards:

Based on SAMHSA standards, Arize is continuing to expand interoperability capabilities. These enhancements support coordination with external healthcare organizations, including evolving support for industry-standard Summary of Care document exchange and care transition workflows.

Integrated Screening and Assessment Tools:

Arize embeds tools like the PHQ-9 and Columbia Suicide Risk Assessment directly within clinical workflows, and allows for the tracking of clinical measures such as BMI or tobacco use. This is vital for the comprehensive screening and assessment services CCBHCs are required to provide.

Reporting for Outcomes and Improvements:

Arize allows CCBHCs to track patient progress, client satisfaction, and quality improvement initiatives through reporting workflows that support organizational and regulatory reporting needs. This helps providers deliver better care and achieve compliance with federal outcome tracking requirements.
