

## An EHR Built for How Behavioral Health Truly Works

### Behavioral health doesn't need more software. It needs systems that actually work.

Legacy EHRs designed for billing and compliance have eroded staff capacity. Over time, they've created unnecessary complexity, manual workarounds, and administrative burden that slow teams down and contribute to burnout.

More features don't fix a broken foundation. More integrations don't fix fragmented processes. Providers need systems that simplify workflows, adapt to real-world program needs, and help them build a sustainable future.

That's why Cantata's **Arize EHR** is built to undo the complexity and workarounds that legacy platforms created. It gives behavioral health and human services organizations the ability to reduce vendor dependence and operate with greater control, meaning:

- Staff spend less time navigating software and more time on meaningful work
- Leadership has better visibility
- Organizations maintain consistency even as they scale

Unlike legacy systems adapted over time, Arize is built for flexibility from the ground up. That means more control (only if you want it!) without the technical overhead of traditional platforms.

### Why Arize is different.

#### Designed to Replace, Not Replicate

Legacy systems often get rebuilt with new interfaces but the same underlying limitations. Arize is built differently so you're not carrying forward the problems you're trying to solve.

#### Reduces Friction, Not Just Adds Features

Most platforms compete by adding more features. Arize focuses on removing friction, unnecessary steps, and duplicate work so teams can move faster and work more efficiently.

#### Open By Design—Not Locked Down

Arize is built on an open architecture that gives your organization the flexibility to integrate, extend, and evolve without being constrained.

*"Other products we evaluated felt like getting more of what we already had. We see more opportunity and user benefits with Arize because it's a modern product that's easy for our staff to use and can adapt as we grow."*

- **Stacie Kemp**,  
CEO, Sinnissippi Centers, Inc.

### Configurable Workflows

Arize provides tools that can run right out of the box or adapt to your organization. Configure forms, workflows, dashboards, and reports without custom code or vendor delays, so your teams work the way they want.

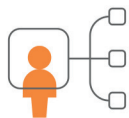

### Full Mobile Functionality

Access all of Arize anytime, anywhere, on any device. Collect and manage data, documentation, progress notes, and other information in real time, even with limited service.

### Control Without Constraint

Make updates, scale programs, and adapt to change without vendor delays or costly change orders. Arize's open architecture, gives your team the flexibility to evolve quickly, while backed by expert support when you need it.

### Unified Solution

Arize integrates clinical, financial, and operational workflows into one platform, eliminating the need for multiple systems. It supports a mix of programs, reduces duplicate data entry, and improves coordination.

### Modern, Built-In Tools

Arize leverages integrated capabilities like global search, telehealth, AI-assisted documentation, plus browser-based tools like voice-to-text and language translation—without adding extra complexity.

### Built for Real-World Use

Arize is designed around how behavioral health teams work, not just billing or compliance requirements. Reduce clicks, eliminate workarounds, and simplify documentation across programs and roles.
